1. Safety Instructions

WARNING: Ensure all safety instructions have been followed prior to servicing.

WARNING: Ensure that no items fall onto the lanes below at any time.

WARNING: Safety helmet and safety belt must be worn to avoid personal injury.

WARNING: The equipment is powered by 230VAC. Power must be shut down during maintenance and when not testing.

CAUTION: When the door/cover of the equipment is opened, please ensure it is fixed before performing next procedure. After finishing maintenance, ensure the door/cover is locked.

CAUTION: The LEDs on LED Module of the equipment are ESD (Electro-Static Discharge) sensitive. Take necessary precautions to prevent damage to the LED.

1.1. Health and Safety

All personnel involved in carrying out the work must be aware of any site working regulations and required certification.

Before taking any installation or maintenance action, service personal must follow the above safe working practices:

- Only allow sufficiently experienced personnel to do maintenance.
- Provide sufficient illumination for the job, especially during non-daylight hours.
- Wear personal protective gear when working near or with energized parts.
- Use insulated tools and equipment when working near or with energized parts.
- Take measures to avoid inadvertent contact of conductive materials or equipment with energized parts of VMS

WARNING – HIGH VOLTAGE

The VMS is a 12 VDC device. Harding Traffic cannot guarantee that high voltages may not have been introduced as part of the installation e.g. 230VAC: 12VDC Power Supply.

Service Personal must ensure that the system is suitably isolated before working on the VMS

CAUTION – HEAVY EQUIPMENT

The VMS should be adequately supported during installation, replacement or maintenance. All lifting and moving jobs must be performed by mobile crane or other suitable lifting device.

2. **General Overview**

2.1. Cabinet Specifications

Rear Access

Cabinet height: 1200mm

Cabinet width: 800mm

Cabinet thickness: 150mm

Weight: 37kg without Batteries

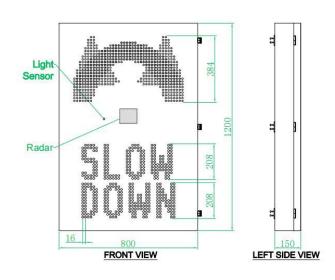

Cabinet Material: Aluminium

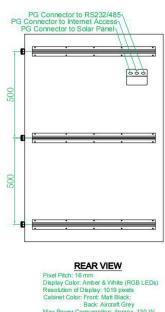

Paint Colour: Front - Matt Black

Rear – Aircraft Grey

Maintenance method: Front Access

Pixel Pitch: P16

2.2. Optical Characteristics

LuminanceEN12966L3Luminance ratioEN12966R3ColourEN12966C2

Beam width EN12966 (H: 30°, V: -10°)

2.3. Electrical Characteristics

Power supply 12V/24V DC

Power consumption (Max)* 50W

Power consumption (Average) 20W

Internal voltage - LED boards 4.2VDC

Internal voltage - Controller 5VDC

2.4. Major Components

2.4.1 CPU / Controller Card - 9281

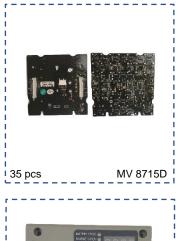

^{*}Max power consumption is only ever achieved within a manually initiated test. Max power is with all LED's on, in white and manually set to full brightness.

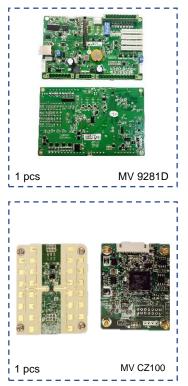

| No. | Name | Description |
|-----|-----------------------------------------|----------------------------------------------------------------------------------------|
| 1 | Network interface-RJ45 | Ethernet interface for major network |
| 2 | Console serial port | TTL3.3V, to connect software |
| 3 | Radar RS232+RS485 PORT | RS232/RS48 port for customer to self-define CZ9281, switch P1 to choose RS232 or RS485 |
| 4 | PC RS232+RS485 PORT | RS232/RS48 port for Customer to self-define CZ9281, switch P2 to choose RS232 or RS485 |
| 5 | Power port | To connect with 4.6V-26V power input |
| 6 | 8 output control port | To control wigwag |
| 7 | Extended RS485 port | For additional device |
| 8 | LED panel port | Connect to the LED Panel (EN port) |
| 9 | FPGA download port | 2x3P FPGA download port |
| 10 | External voltage signal isolation input | HGND: External voltage IN1-8:voltage input |
| 11 | Light sensor port | To connect with environment light sensors; two can be connected. |
| 12 | Relay Port | To connect relay and public terminal |
| 13 | Spare battery port | |
| 14 | Hub board port | Supply 5V power and GND, the max output 7.5W |
| 15 | CPU Download port | To download CPU program |

2.4.2 Other components

| CODE | DESCRIPTION |
|------------|------------------------------------------|
| MV 8715D | VMS LED PANEL P16mm 8*8 RGB |
| MV 9281D | DC-DC POWER IMPOSA 110-7404 |
| MV 9136B-A | DC-DC POWER IMPOSA 110-7404 INCL 3139C-A |
| MV 9140E | SOLAR CHARGER 12/24V IMPOSA 110-7403 |
| MV CZ100 | INTERNAL RADAR |
| MV LTK1DS | CABINET DOOR SWITCH LTK-1 (ITS-02-01) |

3. Maintenance Guide

3.1. Maintenance Tool List

| Maintenance Tool List | | | |
|-----------------------|---------------------------|----------|--------------|
| Item | Tool | Quantity | Remarks |
| 1. | Torx screwdriver | 1 | |
| 2. | Long Phillips screwdriver | 1 | lacktriangle |
| 3. | Slotted screwdriver | 1 | |
| 4. | Multimeter | 1 | |
| 5. | Cabinet Keys | 1 | × |

3.2. Preventative Maintenance

To ensure the continued optimal performance and longevity of your PCWS in challenging environments, regular preventive maintenance is recommended. By following these guidelines, you can mitigate potential issues and extend the lifespan of your product:

Cleaning Schedule: Establish a routine cleaning schedule based on the local conditions and usage. While the standard recommendation is maintenance every six months, consider more frequent cleaning if the environment is particularly harsh.

Cabinet Maintenance:

- **a**. Employ a pressure cleaner to clean the rear of the cabinet, removing accumulated dirt and grime.
- **b**. Regularly check the cabinet's interior by opening the door. Evaluate the operational status and address any anomalies promptly.

Record Keeping: Maintain a record of maintenance activities, including dates, procedures performed, and observations made. This documentation can help track the product's health and guide future maintenance decisions.

Professional Inspection: Periodically, consider engaging professional technicians to conduct a thorough inspection of the PCWS. Their expertise can identify potential issues that might not be apparent during routine maintenance.

| Faults | Action |
|--------------------------------------------------------------------------|------------------------------------------------------------------------------------------------|
| Check if there are marks, scratches, dirt or cracks on the front windows | Use a suitable cleaning solution to remove them |
| Observe if the PCWS is receiving correct | If not, report fault to Harding Traffic Ltd |
| messages from the management system | |
| Check if the door locks are secured tightly or any parts are broken | If not, insert the required key in the lock and turn clockwise to tighten or change the parts. |
| Check if all the cable glands are secured tightly. | If loose, push in the gland and ensure they are secured connected. |

3.3. Cabinet Maintenance

Because of its ability to withstand extremely harsh environments, the PCWS requires minimal maintenance. However, regular maintenance can help prolong the product's lifespan and ensure optimal display performance.

The suggested maintenance interval is every six months, although this duration can be adapted based on the local conditions..

Maintenance tool:

- Gentle non-woven fabric or a soft brush
- Neutral cleaning solution (non abrasive)
 Basic maintenance equipment

Recommended Maintenance Procedure

- 1) Moisten a cloth with the cleaning solution, then use it to gently wipe away dust from the display surface. Rinse the surface with water afterwards. (For a thorough clean, a pressure cleaner can be employed, utilizing commonly accepted techniques similar to washing cars.
- 2) The back of the cabinet can also be cleaned using a pressure cleaner.

 Following the VMS wash, open the door to inspect and assess the operational status within the cabinet.

Trouble Shooting

| Item | Description | Solution |
|-----------------------|---------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| No Display | VMS does not respond and cannot be lit | 1. Check power supply:Check ConnectionsCheck Input VoltageCheck inputs |
| | Full screen display flower screen | Picture overlap, part of the picture is missing, screen position shift etc, please contact Harding Traffic |
| | Tile/s failure including LED is always on, bright / dim, flashing or color patches | One module display is not working or has abnormal brightness: |
| | Optical sensor problem | Check whether the Optical sensor connector is reliably connected to the CPU / Controller Card Check whether the Optical Sensor wire is damaged Swap with another light sensor to confirm whether the issue is with the sensor or elsewhere |
| Functional problem | Door sensor | Check whether the door switch connector is reliably connected to the CPU / Controller Card Check if the contact of the door sensor is operating (normally open – closes when door is shut) Swap with another door switch to confirm whether the issue is with the sensor or elsewhere If the above method still cannot solve the problem, please contact the manufacturer's professional and technical personnel for handling. |

In all other cases, please contact Harding Traffic on 09 259 0894 or at service@hardingtraffic.co.nz
